

CPR360 *Lab Assessment*

A 360° view of your lab's performance — and a clear roadmap to improve it

PERFORMANCE ASSESSMENT

Every lab has improvement opportunities hiding in plain sight. But increasing workloads, staffing constraints, and compliance demands can make it difficult to step back and see where performance is being slowed, risk is increasing, or staff time is being stretched. A **CPR360 Lab Assessment** from Data Innovations examines your lab across connectivity, productivity, and risk management — helping identify the specific changes that can have the greatest operational impact.

Connectivity

Connectivity gaps are identified that may reduce efficiency and overall lab performance, including issues related to system integration, device connectivity, manual work, and data silos.

Productivity

Workflow bottlenecks, test delays, manual processes, and other barriers are assessed to understand what may be holding back operational performance and staff productivity.

Risk Management

Vulnerabilities are identified that may affect compliance, quality, turnaround time, and system resilience, helping your lab better understand where risk can be reduced.

WHAT YOU GAIN

Assessment Benefits

- ✓ Lab-specific insight grounded in your actual systems, workflows and operating environment.
- ✓ Clear priorities aligned to your lab's goals.
- ✓ Vendor-neutral recommendations that work with any LIS or IVD supplier.
- ✓ Expertise and insight from consultants with experience in various clinical lab environments.
- ✓ Optional implementation planning and follow-through support available after the assessment.
- ✓ Future-ready guidance to support growth, technology changes, and long-term operational goals.

What to Expect from Your CPR360 *Lab Assessment*

The CPR360 assessment is designed to be focused, practical, and minimally disruptive. Your only investment is about one day of your team's time.

01

Focused On-Site Review

A DI consultant meets with lab staff to understand how work gets done, where teams experience friction, and where existing systems or processes may be creating unnecessary effort.

02

Findings You Can Use

After the assessment, your team receives a structured summary of key observations, improvement opportunities, and areas that may warrant closer attention.

Recommendations are organized to help your team understand where to focus first, what can be addressed with current resources, and where additional planning or support may be helpful.

⚠️ Assessment Availability Is Limited

CPR360 is offered on a selective basis to qualifying laboratories. The number of assessments performed each quarter is limited by design so that each lab receives the focused, dedicated attention it deserves.

- Labs must submit a request and be reviewed for qualification.
- Each assessment is conducted by a dedicated DI consultant with hands-on clinical lab experience.

What *Story* Will Your Lab Tell?

CPR360 helps uncover opportunities that may be hidden in day-to-day operations. Recent assessments in various labs have identified opportunities related to:

- Knowledge sharing and succession planning
- Laboratory analytics and operational visibility
- Workflow efficiency and automation
- Quality assurance standardization
- Middleware optimization
- Staff productivity and burnout reduction
- Future growth and scalability planning
- Risk reduction and operational resilience

Every laboratory has a story.
Discover the opportunities a CPR360 assessment could reveal in yours.
